

Timestamp	Do you allow student owned devices to be used in your classroom?	Do you have in-classroom students bring their own devices?	If you had to choose from the following, which would be your best choice?	What is your biggest concern?	What programs are most often utilized by your students?	What unique things are you doing with incorporating technology into your classroom?	Are there any unique technology needs that you are looking for for the 2014-15 school year?
12/18/2014 9:19:38	Yes	Yes	Scheduling students to use Weekly	Microsoft PowerPoint	Microsoft PowerPoint	The availability of computer lab	Provides some training on using Smartboard and how to connect laptops to Smartboard.
12/18/2014 9:20:14	Yes	No	Sharing laptop cart in de Monthly	Google Apps for Educat	Horizon, eCart	The preparation that goes	horizon with the entire A. I think it would be neat "showcase" one quick, relatively easy thing we could use in the classroom in a quarterly email and optional presentation available. I know a lot of teachers avoid incorporating technology because we do not know how to do it and are limited on time so we don't learn it.

What is your biggest challenge as it relates to incorporating technology into your classroom?	
time - availability of computers, especially laptop carts that are not kept plugged into the wall, nor do students connect the power cords when returning to the cart.	
time	
The technology available at West Potomac is slow and cumbersome (with software that eats up memory) WE NEED CHROMEBOOKS!	
The preparation that goes into it - I am not familiar with a lot of the programs and would have to use them first. Also when I use Horizon to test in my classroom there are usually laptop/login difficulties with about 1/3 of students. It is not necessarily a tech problem as students often do not know how to log in.	
The laptops we have access to are old, slow, and frequently need new batteries	
The laptops not holding a charge long enough for them to use them properly.	
The laptop carts are a huge pain in most cases. The majority of them don't work well if at all – they don't hold a charge and they are very, very slow. All the school computers tend to be frustratingly slow. Many of my students tend to forget their log-ins and get locked out of the system. My students have phones, but do not and most will not bring laptops because they don't own them or they are afraid they'll be stolen.	
The hardware is slow and unreliable	
the computers suck. students can't log on in a timely fashion. Its too SLOW to be used effectively	
the online textbooks also don't get used by students	
The availability of computers for my students. The computers in the laptop cart are too slow and generally the computer lab is not available when I plan to use it with my students.	
Students' abilities/knowledge of technology (hardware & software). Not everyone is tech-savie.	
Students lack of focus	
students get side tracked with using their own cell phone	
Students access pther sites than directed	
Slow speed and unreliability of the laptops is a significant deterrent to their use.	
slow computers,	
slow computers and or programs	
Ready access to computers (and enough for all of my students and/or groups)	
Phones out all the time and student never put them away even when asked.	
Older equipment	
Not having technology for every student. This is especially true in my freshmen classes as many of them either do not own a phone or do not have a smartphone.	
Not having enough working computers in the computer carts for my 43 students.	
not enough resources	
Not enough reliable access to technology for individual students to use.	
Not enough access to computers and computer labs	
Not all students have access to technology at home. Many students do not use personal devices responsibly.	
None we use it	
No computers in class.	
No access. I love technology but have no way to get WORKING computers in the room.	
Need for computers for ALL students.	
mobile carts that have computers that actually work and are not incredibly slow	
making sure it works all the time	
Large class sizes, 40+ in every class and very difficult to schedule labs or have enough technology available.	
Laptop speed for simulations/labs	
Lack of computer access	
Lack of access. There aren't enough computers, and the ones we have work very poorly.	
Lack of access to technology	
Kids having enough access to realistic machines	
keeping up to date	
Keeping students on task while using electronic devices.	
Keeping kids off of their phones when we are doing something else.	
I would love to be able to connect my iPad WIRELESSLY to my projector so that I can walk around the room while I teach.	
I can't find the technology I want or its already signed out.	
Having up to date computers	
Having time to create/modify activities involving a wider variety of technology.	
Having it work for certain topics.	
Having enough working computers.	
Having enough working computers.	
having enough equipment/ updated equipment	
Getting students to put them away.	
functionability	
Floating teacher in two different buildings and more students than computers in a cart.	
Finding Activities	
Devices we have are too old, slow, and unreliable.	
Computers working; access to printing documents!	
Carts with laptops that are slow and are not charged.	
Availability of computers and having good functioning computers.	
Accessibility to laptops and technology	
Access. I have large classes (+30) and need every kid on a laptop to effectively deleiver electronic instruction and/or assessments	
Access.	
Access to technology.	
I DELETED 24 RESPONSES BECAUSE THEY WERE BLANK	

What unique things are you doing with technology in your classroom that you are willing to share?							
Allowing my students to take a quiz using their Smartphone. I make a quiz using a Google docs application and students will sign into their FCPS Google account to take the quiz.							
Allowing very limited occasional use for specific purposes (looking up definitions, etc.)							
As teacher: I record audio of homework readings for students who prefer to listen as they read. For students: I allow students to record and/or dictate their writing instead of always typing essays or written work.							
Assisstive technology in low incidence classroom							
can't think of anything unique							
Google Apps I feel very limited since I float and do not have access to carts. I have to reserve the labs when they are available.							
Google Docs for example: wrapping up basketball unit so kids needed to watch a video on Kobe Bryant and then answer corresponding questions via google docs. All was linked thru blkbd.							
Horizon with the entire Algebra 1 team - Allison Satterwhite Barker then puts together the data for us to compare and share what works and what doesn't as a team. Remind101 (does that even count?)							
I do Webquests with the students, allow writing time whenever possible leading up to a paper submission, and am hoping to incorporate google docs into my teaching to allow for peer editing, online conversation, etc.							
I have the kids use their phones to look things up since I don;t have enough computers in my room. I then have them write their assignments and email it to me. no paper.							
I haven't really branched out yet...staying safe. As a matter of fact, I just opened up my first Discussion Board on Blackboard this week! Getting there!							
I use cell phones for many many different activities. They have nearly rendered the textbook obsolete.							
I use Inspiration for writing and note taking							
iMovie app							
Infographs							
Integrating Minitab to create graphical displays. Using Socrative on a limited basis, but would like to expand.							
Ipad							
Most of my students do not have access to the internet or computers at home.							
Music Technology							
N/A							
n/a							
None							
Not sure if it's unique - but I am using Google Docs more and more...and especially Google Calendar, shared with both students and parents.							
Nothing unique.							
Poll everywhere.							
Students were introduced to audacity from Ms. Meeks and she had them record their project orally before the presentation.							
text to speak features							
There are many things we can do with an ipad but we don't have any							
Twitter usage							
unique---none							
Use of clickers (classroom response systems), interactive smart notebook files							
Using Audacity, have students listen to their own presentations before they present in front of the class.							
Using pedometer app on cell phone.							
Vernier probes for science labs							
we use apps for certain topics							
Webquests							
webquests							
Writing workshops and grading through GoogleDocs.							

Are there any unmet technology needs the technology team can focus on for the 2014-15 school year?								
ESOL department has old computers and many of them do not function well. We are constantly requesting technical assistance. We are in need of more computers, our population has increased and we have limited number of carts								
can't think of any								
CHROMEBOOKS								
Fixing broken computers such as the charge, broken keys, broken plugs, etc.								
Get computers that work. Fix computers that are slow. Have smartboards in the ceilings with the same setup in every room.								
If you allow own-devices in school, please get the software that allows the teacher to see what everyone is working on. Most kids get off task and the distraction and lure of social media is strong.								
Many of my students have remarked that the most of the bullying that happens at school occurs through social media and they say their is a LOT of online bullying.								
Get more mobile phone apps approved through the county!								
Getting us more computers that work.								
Google docs								
Google docs								
Have a way to shut down cell phone access in the classroom								
Having enough working computers.								
How to integrate student devices into instruction.								
I don't like the options for some questions. We need computers that don't take 10 minutes to "open". We need enough computers for an average of 30 students per class.								
I frankly think tablet carts would be a better use of school money than laptop carts. Most in class activities could be done on a tablet, and they're faster and easier to use.								
I think it would be neat to "showcase" one quick, relatively easy thing we could use in the classroom in a quarterly email and optional presentation available. I know a lot of teachers avoid incorporating technology because we do not know how to do it and are limited on time so we do not learn it.								
I would love to be able to connect my iPad WIRELESSLY to my projector so that I can walk around the room while I teach.								
If technology is to be incorporated it must be up to date								
Info for SIS.								
just making sure laptops in carts are working								
Laptops that actually hold a charge and don't take 20 minutes to log on.								
MACHINES!!!!								
mobile laps that can support Adobe creative suite with laptop count of 30 to suite large class sizes								
more consistent updating of laptops, so that it doesn't take 15 minutes for a student to log in.								
more effective online access.								
More technology								
Nah.								
need more ideas for cool things we can do in the classroom w/ the kids								
Need up to date computers								
New computers. Our computer carts (ESOL-Netbooks) were purchased by the county through Title 3 funds and have been in use over the past five years almost daily. They have reached a point that they are becoming dinosaurs and starting to die. We would very much like to have new computers to replace these. One of the requirements by the county ESOL is to have L3 students participate in the Global Awareness Technology Project, a technology based project that requires daily use of the computers over a quarter and half. Over the past two years we have had to depend on and dominate the computers in the library to sufficiently complete the project. We also would love to get some assistance with the iPads that we were given through a grant. It is embarrassing to go to county meetings and hear what other schools are doing with the iPads and we cannot get any help!!!!								
Newer laptops for teachers.								
no								

Are there any unmet technology needs the technology team can focus on for the 2014-15 school year?							
No

No access. Would love to just be able to have enough access to give ecart tests to reduce paper use.							
Not sure.							
Probably not something the technology team can fix, but most of the laptops available for student use are incredibly outdated and do not work appropriately. We have had MAJOR issues during the SOL retake window when we needed to use both desktop and laptop computers (for students with various accommodations); the laptops do not always support the software we need to use and even those that can run the programs are SO slow and do not hold a charge.							
Probeware, updated java							
Provide some training on using Smartboard and how to connect tablets to Smartboard.
